### Intended Use
System reagent for the quantitative determination of Cholesterol concentrations in human serum on Beckman Coulter AU analyzers.

*Cholesterol reagent OSR6516 for use on the AU2700/5400/680 system only.

### Summary
Measurements of cholesterol are used primarily in the diagnosis and treatment of disorders involving excess cholesterol in the blood, and lipid and lipoprotein metabolism disorders.

Total serum cholesterol analysis has proven useful in the diagnosis of hyperlipoproteinemia, atherosclerosis, hepatic and thyroid diseases. Total and HDL cholesterols, in conjunction with a triglyceride determination, provide valuable information for the prediction of coronary heart disease.

### Methodology
Assays of total cholesterol in saponified serum extracts using “cholesterol dehydrogenase” was begun by Flegg and Richmond. Previously, Hernandez and Chaikoff and Hyun et al. had isolated a cholesterol ester hydrolase which was effective in producing free cholesterol from cholesterol esters. Finally, in 1974, Allain et al. and Rieschelau et al. were able to combine the esterase and oxidase into a single enzymatic reagent for the determination of total cholesterol; this is the basis for the Cholesterol method.

The Cholesterol reagent has been certified to meet the National Cholesterol Education Program’s (NCEP) performance criteria for accuracy.

Cholesterol esters in serum are hydrolyzed by cholesterol esterase (CHE). The free cholesterol produced is oxidized by cholesterol oxidase (CHO) to cholest-4-en-3-one with the simultaneous production of hydrogen peroxide (H₂O₂), which oxidatively couples with 4-aminoantipyrine and phenol in the presence of peroxidase to yield a chromophore.

The red quinoneimine dye formed can be measured spectrophotometrically at 540/600 nm as an increase in absorbance.

```
CHE
Cholesterol esters
+ O₂
へ CHO
Cholesterol + Fatty acids
へ Peroxidase
2 H₂O₂ + 4-aminoantipyrine + phenol
Red dye + 4 H₂O₂
```

### System Information
For AU400/400®/480, AU600/640/640®/680 and AU2700/5400 Beckman Coulter Analyzers.

### Reagents
Final concentration of reactive ingredients:

- Phosphate buffer (pH 6.5) 103 mmol/L
- Cholesterol Esterase (Candida/Pancreatic) ≥ 0.2 kU/L (3.3 µkat/L)
- 4-Aminoantipyrine 0.31 mmol/L
- Cholesterol Oxidase (Brevibacterium) ≥ 0.2 kU/L (3.3 µkat/L)
- Phenol 5.2 mmol/L
- Peroxidase (Horseradish) ≥ 10.0 kU/L (166.7 µkat/L)
- Also contains preservatives

### Precautions
1. For in vitro diagnostic use.
2. WARNING! POISON! Contains phenol which may be fatal if swallowed. Avoid contact with eyes, skin and mucous membranes. In case of external contact, immediately rinse affected area with large amounts of water. Obtain medical attention immediately for eye contact or ingestion.
3. Contains sodium azide as a preservative which may react with lead joints in copper plumbing to form explosive compounds. Even though the reagent contains minute quantities of sodium azide, drains should be well flushed with water when discarding the reagent.

### Preparation of Reagents
The Cholesterol Reagents are ready for use. No preparation is required.

### Storage and Stability
1. The unopened reagent is stable until the expiration date printed on the label when stored at 2 - 8°C.
2. Opened reagent is stable for 90 days when stored in the refrigerated compartment of the analyzer.

### Indications of Deterioration
Visible signs of microbial growth, turbidity or precipitate, or any change in color in the Cholesterol reagent may indicate degradation and warrant discontinuance of use.

The reagent is normally pink in color.
Cholesterol

Specimen Collection and Preparation
Serum samples and EDTA or heparinized plasma, free from hemolysis, are the recommended specimens. Separate serum from blood cells as soon as possible. Plasma is not recommended using anticoagulants such as oxalate, citrate or fluoride. Total Cholesterol levels in EDTA plasma should be corrected by multiplying the result obtained by 1.03 to be equivalent to serum levels of Total Cholesterol.

Sample Storage and Stability
Total cholesterol in serum has been reported to be stable for at least 7 days when stored at 2 - 8°C, up to 3 months when stored at ≤ -20°C and years at -70°C.

Interfering Substances
Results of studies show that the following substances interfere with this cholesterol assay.
The criteria for no significant interference is recovery within 10% of the initial value.

<table>
<thead>
<tr>
<th>Substance</th>
<th>Interference</th>
</tr>
</thead>
<tbody>
<tr>
<td>Ascorbate</td>
<td>No significant interference up to 3 mg/dL</td>
</tr>
<tr>
<td>Bilirubin</td>
<td>No significant interference up to 8 mg/dL</td>
</tr>
<tr>
<td>Hemolysis</td>
<td>No significant interference up to 500 mg/dL</td>
</tr>
<tr>
<td>Lipemia</td>
<td>No significant interference up to 1000 mg/dL</td>
</tr>
</tbody>
</table>

* Intralipid, manufactured by KabiVitrum Inc., is a 20% IV fat emulsion used to emulate extremely turbid samples.

The information presented is based on results from Beckman Coulter studies and is current at the date of publication. Beckman Coulter Inc., makes no representation about the completeness or accuracy of results generated by future studies. For further information on interfering substances, refer to Young for a compilation of reported interferences with this test.

Procedure
A complete list of test parameters and operational procedure can be found in the User’s Guide appropriate to the analyzer.

Materials Provided
Cholesterol Reagent.

Materials required but not provided
Chemistry Calibrator (Cat # DR0070)

Stability of Final Reaction Mixture
The Beckman Coulter AU analyzer automatically computes every determination at the same time interval.

Calibration
The frequency of calibration is every 30 days. Calibration of this cholesterol procedure is accomplished by use of the Chemistry Calibrator (Cat # DR0070), which is traceable to the National Institutes of Standards and Technology (NIST) Standard Reference Material (SRM) 909b.

Recalibration of this test is required when any of these conditions exist:
1. A reagent lot number has changed or there is an observed shift in control values.
2. Major preventative maintenance was performed on the analyzer.
3. A critical part was replaced.

Quality Control
During operation of the Beckman Coulter AU analyzer at least two levels of an appropriate quality control material should be tested a minimum of once a day. In addition, controls should be performed after calibration, with each new lot of reagent, and after specific maintenance or troubleshooting steps described in the appropriate User’s Guide. Quality control testing should be performed in accordance with regulatory requirements and each laboratory’s standard procedure.

Results
Results are automatically printed out for each sample in mg/dL at 37°C. For SI Units (mmol/L) the results must be multiplied by 0.0259.

Dynamic Range
The Cholesterol procedure is linear from 25 to 700 mg/dL. Samples exceeding the upper limit of linearity should be diluted and repeated. The sample may be diluted, repeated and multiplied by the dilution factor automatically utilizing the AUTO REPEAT RUN.

Expected Values

<thead>
<tr>
<th>Total Cholesterol</th>
<th>Risk Classification</th>
<th>Reference Range</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt; 200 mg/dL</td>
<td>Desirable</td>
<td>136 - 290 mg/dL</td>
</tr>
<tr>
<td>200 - 239 mg/dL</td>
<td>Borderline High</td>
<td></td>
</tr>
<tr>
<td>&gt; 240 mg/dL</td>
<td>High</td>
<td></td>
</tr>
</tbody>
</table>

Expected values may vary with age, sex, diet and geographical location. Each laboratory should determine its own expected values as dictated by good laboratory practice.

Specific Performance Characteristics
The following data was obtained using the Cholesterol Reagent on Beckman Coulter AU analyzers according to established procedures. Results obtained in individual laboratories may differ.

Precision
Estimates of precision, based on CLSI recommendations, are consistent with typical performance. The within run and total precision is less than 3% CV. Assays of control sera were performed and this data reduced following CLSI guidelines above.
